

## **The Personal & Business Security Shop's new website Features Do-It-Yourself Security Camera Surveillance Systems**

*New business FOCUS is on simple easy to install Security Camera & Surveillance Systems for home owners and businesses. These complete systems using wireless cameras are virtually 'plug & play' and include monitor & DVR...*

February 21, 2010 (FPRC) -- The Personal & Business Security Shop; located in Victoria, Virginia (USA), just announced that it's new website recently went 'live' on the world wide web. According to the owner, W.G. Smith, the brand new website has just gone through testing, and is now available to serve customers 24 hours a day, 7 days a week.

Visitors to the new website should find most everything they would need to provide themselves, their family, or their business with the protection and security they need in the form of do-it-yourself video security cameras & surveillance systems.

Mr. Smith emphasized that even though some people might be concerned about the installation &/or operation of their own home or business security system, practically anybody can install these themselves since most of the components making up these video surveillance systems are simply 'plug & play'. The wireless cameras make remote locations even easier for the inexperienced user, since running cables between the camera & the rest of the system is no longer required. And, at no time should the assistance be needed or necessary from a professional installer. Technical advice is readily available and free from the new website. You really can do it yourself!

For those seeking a solution to monitoring their home or business from a remote location, this new website also features what are known as I.P. Cameras. Should you not know what a IP Camera is; Wikipedia defines it as: IP cameras are Closed-circuit television (CCTV) cameras that use Internet Protocol to transmit image data and control signals over a Fast Ethernet link. In layman's terms, what that means is, you can be anywhere on the planet and monitor your home or business provided you have a IP camera doing the looking, and you have a computer with internet access to allow you to do the watching!

Mr. Smith pointed out that their new site is primarily directed at serving United States citizens and Canadian residents at this time, since many of these items are designed to use electricity based on the U.S.A. standard. Like the USA, residential Canada uses 110 volt electrical systems at 60 hertz.

...

Mr. Smith encourages anyone interested in protecting their family or providing video security for their home or business to visit the new website listed below.
