

Testing Confirms the Performance of Dynacycle Oil Exceeds that of Harley-Davidson's Syn3 Motor Oil

Dynacycle Oils Superior Protection Shows an Immediate Gain in Horsepower and Torque Due to a Reduction in Friction

November 12, 2010 (FPRC) -- The Dynacycle Oil Company is announcing that independent dynamometer testing under accelerated conditions has confirmed that the performance and protection of Dynacycle Oil has exceeded that of Harley-Davidson's Screamin Eagle SYN3. The test was conducted on a Dynojet 250i dynamometer, using a 2003 Harley-Davidson Softail as a mule. No other changes were made to the motorcycle before or during each testing phase. Both tests were run at an engine temperature of 230 degrees. By simply changing the oil from Harley's Syn3 to Dynacycle, the dynamometer measured an increase of 1.43 more horsepower and 0.6 more pounds of torque confirming the reduction of engine friction.

The recent independent dynamometer testing was conducted by Bill Greenrock, owner of Greenrock Performance, located at 1473 Tower Square, Ventura, CA. Bill has over 30 years experience in the motorcycle repair and performance industry. His business, established in 1990, is a full time independent shop that deals with service, factory maintenance, service, engine analysis, performance upgrades, dyno tuning, and discounted parts. The Greenrock Performance Dyno Tuning facility uses programs such as Power Commander, Direct Link and TTS Master Tuners, on both carbureted and fuel injected bikes.

Dynacycle Oil, established in 2003, is a biker owned and operated lubricant manufacturer headquartered in central New Jersey. Dynacycle Oil, a 20w-50 premium semi-synthetic blend motor oil, is made in the USA and is specifically formulated for all 4 stroke air and water cooled motorcycle and performance engines. Its superior protection reduces engine friction thus decreasing operating temperature and increasing horsepower, torque, piston and bearing life, and MPG.
