

Peak PC Performance Guaranteed With Atanium's Automatic Driver Updates

Atanium Software launches new "Atanium Driver Updater 2011"

Boston, MA – Atanium Software, a proven leader in the world of powerful, effective, and affordable PC utilities software, has announced the release of the 2011 version of its convenient and easy-to-use Driver Updater. Atanium Driver Updater 2011 is a comprehensive and convenient application that takes the guesswork out of keeping hardware drivers up-to-date, making it easy to avoid the poor PC performance, hardware conflicts, and crashes caused by outdated drivers. After installation, it automatically scans a PC for outdated drivers, and when necessary, installs the newest version of each original manufacturer system driver to ensure continuous peak performance.

"We designed the latest incarnation of our Driver Updater utility to be even better at saving our user base the time and the aggravation of having to stay on top of critical system drivers – which can feel like a full-time job," said Henry Gates. "Letting our software do the work for you means you have more time to focus on getting the most out of your computer, whether you're using it for work or for play."

The 2011 version of Atanium Software's Driver Updater includes the following features:

- Scheduled auto-scan routinely checks for outdated drivers and finds the latest drivers using a vast global database
- One-click convenience makes installing multiple authentic device drivers from the original manufacturers fast, easy, and secure
- Built in backups of existing drivers are created before any updates are installed to ensure full restoration functionality
- Compatible with 32- and 64-bit versions of Windows XP, Windows Vista, and Windows 7

Atanium Software's Driver Updater 2011 utility, with Extended Download Service, can be purchased on its own for \$35.98 or as part of the company's 2011 PC Optimization Suite at <http://www.ataniumsoftware.com/>.
