

Red Hot Property Singapore Updates With Four Hot Developments In Singapore

Red Hot Property Singapore has updated with four new upcoming projects that are getting the property world excited for 2014 developments.

Singapore, SG February 21, 2014 (FPRC) -- Property development in Singapore is accelerating as the island continues to thrive through the 21st century as a major trade center, having all the advantages of proximity to China while being in neutral geopolitical territory- the same characteristics that saw the city first flourish during the naval gold age. Red Hot Property Singapore is a website that dedicates itself to keeping property seekers up to date on the latest new and upcoming developments, and can help people go from speculation to viewing to renting or buying. They have recently published information on four exciting new developments.

The new developments include Rivertrees Residences, Hexacube, Ascent and ARC380. Each of the developments come replete with high quality imagery, a top-line summary and a detailed breakdown of the vital property details, together with maps and a guide to local amenities and attractions.

The idea is to provide the most complete resource center available for new property developments being made available month by month, so those interested in investing in the property market or simply looking for a new home can do so at a single source. The website aims to cover every new launch in Singapore.

A spokesperson for Red Hot Property Singapore explained, "Anyone looking for a new condo in Singapore can find what they're looking for at Red Hot Property. We don't only feature upcoming developments but newly launched properties too, so people who are looking for an immediate move can find up to date, top-spec properties as well. We feature both leasehold and freehold properties and allow people to search by location, so they can find a place that is convenient for commuting as well as living and raising a family. Wherever possible we include video content to give people as realistic a presentation as possible before they book for viewings."

About Red Hot Property Singapore: Red Hot Property Singapore provides the latest information on the property market in Singapore in both residential and commercial real estate. The company offer information on upcoming and newly available developments of all kinds.
