

## **Armor Garage Proprietary PVC Floor Tiles Installed at Kyger Creek Power Station**

*Armor Garage's new, proprietary PVC floor tiles, treated with the anti-stain additive called Armor Shield, were selected for installation at the Kyger Creek power station located in Cheshire, Ohio.*

August 28, 2014 (FPRC) -- Sunny Isles Beach Florida - Armor Garage, leading supplier of commercial and industrial flooring products, was recently selected by the operators of the Kyger Creek coal fired power station, located in Cheshire, Ohio, to resurface the turbine deck of their power station. The product used by Armor Garage for the job was their newest flooring tiles, interlocking PVC tiles treated with a proprietary anti-stain additive called Armor Shield.

Owner of Armor Garage, James Olympios, said this about winning the Kyger Creek contract, "It is very gratifying when a customer recognizes the important differences that our products deliver and then chooses us for a job like the Kyger Creek power plant." He then added, "Our proprietary Armor Shield anti-stain additive will make traditional tile coatings obsolete both from a cost and performance perspective."

Armor Garage has been working Armor Shield for the past four years. The proprietary formula in this additive is a chemical compound that is injected into the tile during the molding process, making it effective throughout the entire tile. Armor Shield adds a glossy, slip-resistant surface that also helps to prevent stains, which is a big problem in coal fired power plants like the Kyger Creek facility. Armor Shield treated tiles are also self extinguishing making them virtually fireproof.

Approximately 45,000 square feet of Armor Garage PVC tiles were installed at the Kyger Creek power plant in less than two weeks. In addition to the fast and easy installation the Armor Shield treated flooring also saved the operators of the plant a significant amount of money. Compared to other options, such as an epoxy floor, Armor Garage tiles are a quarter of the price. They also carry a lifetime guarantee. Epoxy floors have a lifespan of approximately 10 years.

Armor Shield treated PVC tiles have been thoroughly tested, made for heavy duty jobs and built to last a lifetime, which the operators of the Kyger Creek power plant obviously took into consideration when choosing the right product to use when their turbine deck needed to be resurfaced.

About Armor Garage: Armor Garage is a Sunny Isles Beach, Florida supplier of premium grade commercial and industrial coatings and flooring products. The company was founded more than 25 years ago and now specializes in epoxy floor coatings, roof coatings, deck coatings, garage floor tiles and rubber roll out mats. Armor Garage products are easy to install with no prior experience or special skills and are the highest quality, durable products on the market.
