

CertExams.com Network+ Lab Simulator Update

The CompTIA Network+ lab simulator has been updated to .NET version from the current VB6 version. As a result, the software is now compatible with the latest version of Adobe reader. Several lab exercises have been added and/or updated.

November 18, 2014 (FPRC) -- CertExams.com recently updated Network+ Lab Simulator. The network labsim has been updated to .NET version from the current VB6 version. The update is expected remove a few known bugs, like incompatibility with Adobe 11 software. The software complements Network+ exam simulator and enables candidates to have hands on practice on network devices such as routers, switches, servers, and work stations in a simulated environment.

Various important features of the software are given below:

1. Several lab exercises -currently 120+ labs are included with scenario type labs for NAT, Gateway configuration, etc.
2. Workstation, Server, Access Point, Router and Switch (IOS) network simulator.
3. Configure Wireless Access Point,(WAP) DHCP Server, and Switches.
4. Detailed help files that provide step by step instructions on using the simulator have been provided.
5. The trial version is limited to a fewer labs, and a limited command set is available.
6. Network designer provides drag and drop feature for inserting devices and connectors. GUI based device configuration.
