

Objective Develops Bespoke Stock Management Package for Tecserv

The Essex-based development company has installed a custom-designed database for a leading UK photocopier handling specialist.

April 13, 2015 (FPRC) --

TecServ approached Objective keen to invest in a new system that better collated information on its warehouse itineraries. Staff were relying on a series of Excel spreadsheets and add-ins to record stock movement, but upper management were recognising the need for a more systemised solution.

According to Deputy Managing Director Dean Chisholm, off-the-shelf packages were failing to meet TecServ's criteria, so he enlisted the help of Objective's experienced database development team to create a bespoke system that not only offered specific functionality, but was also much more cost-effective.

Using the latest Microsoft ASP.NET and SQL Server Express technologies, the development team at Objective set about developing a brand new warehouse management system that enables stock to be instantly booked in and out, with each item being tracked by a serial number and exact warehouse location. TecServ is now benefitting from:

- Increased management visibility thanks to instantaneous access to stock levels and status
- Faster reporting, which saves time and improves collaboration
- The ability to create user defined reports that are based on set parameters, such as storage dates, serial numbers and customer names
- Access to comprehensive billing reports to speed up the invoicing process

The solution has transformed TecServ's internal processes and Dean is now in a better position to facilitate his company's expansion programme into the Midlands in 2015, a move he believes would not have been possible without the support of this new system.

"Objective IT took the time to understand our business, and it was their thorough approach and excellent attention to detail which led to the installation of a bespoke system that's perfectly suited to Tecserv's requirements," he says.
