CertExams.com Releases Juniper JWEB Simulator

CertExams.com, a leading simulation software provider, released Juniper JWEB simulator that provides GUI based network configuration without the need to use CLI commands.

November 7, 2015 (FPRC) -- CertExams.com updated it's Juniper Network Simulator with Designer for JNCIA. The GUI, named JWEB, enable a network admin to use the graphical tool to configure network components such as routers and
switches without the need to know the CLI commands.

Further, a detailed lab manual is provided, which includes step by step procedure for configuring each lab exercise.

Important features of the netsim software are:
1. The software is completely stand alone, and there is no need for any other software.
2. Hundreds of lab exercises to get familiarized with concepts of routing, NAT, Access lists, subnet masking, etc.
3. Configure and troubleshoot VLANs, VTP, and other switch related tasks
4. There is no hardware required, it s completely software based too.
Additionally, lab exercises are provided to guide the candidates through a structured learning process, thus building confidence. The netsim offered by certexams will also enable users to build their own labs using drag n drop functionality.

You may download the software at:
routersimulator.certexams.com/juniper-sim/index.htm

CertExams.com Juniper NetSim is the first such network simulator that enables a user to configure and test a Juniper router/switch network in a virtual environment without the need for expensive networking devices. The recent update enables a user to do the configuration using JWEB simulator that mimics Juniper JWEB, a graphical User Interface for configuring and troubleshooting Juniper JUNOS devices. The simulator is limited in commands support and developed for learning purpose only.
