

MobileNumberTracker.com Now Enables You to See Contact Name of a Mobile Number

After a repeated popular demand from our millions of users, we have launched a new feature which enable you to see the contact name of any mobile number in India.

December 23, 2016 (FPRC) -- One of repeated feature request from our users was to see contact name of a mobile number. As this will help them in identifying the caller and ultimately it will help them to make a decision in marking it as spam or not without even picking up the call.

We heard our users' voice, and finally today we have released this feature on our website. Now all our users will be able to see contact name for free in every mobile number search. As of now we have added around 50 million Indian mobile numbers in our database. We are working quite hard to make this feature more usable, and therefore we are adding thousands of mobile number on a daily basis. We are also focusing on improving the quality of our search, and now you will see that our response time is 40%-50% faster than earlier.

To see the contact name user will have to be signed-in, otherwise a sign-in link will be visible beside contact name on result page. All registered users will be able to search unlimited numbers, as currently there is no rate limiting on this.

About MobileNumberTracker.com

Founded in 2008, MobileNumberTracker.com gives you the location of a phone number with name and address (if available) on Google Maps. We are the most famous spam call fighting tool in India. We provides location of a phone number with details like Owner Name, City, Mobile Operator, and Telecom Circle on Google Maps. Its been more than 8 years since we launched this product, and have already catered to millions of users on a daily basis.
