

## **Hemophilia A and B Therapeutics in Asia-Pacific Markets to 2022 by Increasing Treatment-Receiving Pool, Launch of Long-Acting Replacement and Non-factor Therapy**

*Hemophilia A and B Therapeutics in Asia-Pacific Markets to 2022, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects over the coming years.*

Hemophilia A and B Therapeutics in Asia-Pacific Markets to 2022, has been prepared based on an in-depth market analysis with inputs from industry experts. The report covers the market landscape and its growth prospects over the coming years. January 11, 2017 /MarketersMedia/ -- Hemophilia is a rare disease affecting more than 400,000 people worldwide. Hemophilia A is four times as common as hemophilia B, and more than half of patients with hemophilia A have a severe form of hemophilia. Males have a much higher chance of developing hemophilia because they only receive one copy of the X chromosome from their mother.

The mainstay of treatment for hemophilia is to replace the missing factor VIII or factor IX, produced using plasma-derived or recombinant methods. Some patients develop inhibitors to factor VIII or factor IX treatment and need a bypassing agent, such as factor VIIa, to resolve bleeds. Patients of hemophilia A or B often require lifelong treatment to prevent and control bleeding episodes, and this therefore represents a lucrative market opportunity.

Complete Report Available at:  
<http://www.reportsweb.com/hemophilia-a-and-b-therapeutics-in-asia-pacific-markets-to-2022> .

The current marketed products landscape comprises replacement factor therapies, such as recombinant therapies and new long-acting recombinant products. The current pipeline shows strong promise, as it shows a gradual shift from short-acting recombinant factor VIII or factor IX to long-acting recombinant factor VIII, and from factor replacement therapies to non-factor therapies. Nevertheless, significant unmet need remains for products that can avoid the development of inhibitors in patients with hemophilia.

Though late-stage pipeline for treatment of hemophilia seems promising, the main market restraint is likely to be low penetration of new long-acting recombinant therapies in India and China, owing to their high expected prices.

Report Scope

The Hemophilia A and B Asia-Pacific market will be valued at \$699.1m and \$112.9m respectively in 2022, growing from \$444.9m and \$76.3m in 2015, at compound annual growth rates of 6.7% and 5.8%.

- How will non-factor therapies contribute to the growth?
- What will be the impact of the new long-acting recombinant factor VIII and recombinant factor IX products in the hemophilia A and B market sales?

The pipeline contains a range of molecule types and molecular targets, including both those that are well established in hemophilia A and B, and novel targeted therapies.
