

## **Organic Healthcare Reveals Formulation behind its Jerusalem Balsam Miracle Spray**

*Organic Healthcare has revealed the ingredients behind one of their latest products.*

February 17, 2017 (FPRC) -- Organic Healthcare today revealed the formulation behind one of their popular products. The company announced the ingredients that had been used to manufacture Jerusalem Balsam Miracle Spray, a 100% bioorganic product that was handmade at the company's Galilee headquarters. This revelation comes just days after the company said that it was looking for a US-based distribution partner to popularize its products in the local market. In addition to the Jerusalem Balsam Spray, Organic Healthcare has also manufactured the Aragan Oil, and the Anti-Nail Fungus. Furthermore, the company has said that it is finalizing work on a number of new formulations slated to be released later this year.

According to Priscilla Rodgers, the brand manager in charge of Organic Healthcare, the key ingredients used to create the Jerusalem Balsam miracle spray include Aloe Vera, Rosemary, Boswellia, Vitis Vinifera, Commiphora Myrrha, Myrtus, and Jasminum.

Aloe Vera is a common ingredient in organic healthcare products. It has many benefits for the body. It acts as an antioxidant, accelerates the healing of burns, reduces dental plaque, reduces constipation, and treats sores and ulcers. Aloe Vera also has antibacterial properties and prevents wrinkling of the skin.

Vitis Vinifera, another ingredient used in the Jerusalem Balsam, also has ample health benefits. Traditionally used as a wound healer and anti-inflammatory medicine, Vitis also has antioxidant properties.

Rosmarinus Officinalis (simply Rosemary) contains antioxidant rosmarinic acid and has antibacterial properties. It also contains essential oils such as camphene, cineol, bornyl acetate, borneol, and others that have anti-inflammatory properties. Rosemary is also an anti-fungal and antiseptic herb.

Boswellia, on the other hand, has been used for hundreds of years to treat inflammatory disorders. It is derived from the sap of the Boswellia tree, native to India. This ingredient has also been known to treat pulmonary disease, diarrhea, and arthritis.

By packing multiple top-value ingredients in one product, Organic Healthcare has created a top-notch healthcare product with the Jerusalem Balsam.

Priscilla Rodgers, said, "Aragan Oil, Jerusalem Balsam, and Anti-Nail Fungus are the only three products that Organic Healthcare has managed to put in the market so far. But the entire team is very delighted about the progress recorded so far. In addition to selling thousands of units on major online marketplaces, Organic Healthcare customer service has received a lot of positive and encouraging reviews from consumers who are happy with the product made here. This encourages the entire team to keep moving forward. To increase knowledge about our products and what formulations are used, it's only fair that we reveal the ingredients behind our top flying Jerusalem Balsam spray. This product was created from Aloe Vera, Citrus medica, Rosmarinus Officinalis, Ruta, Jasminum, Boswellia, Commiphora Myrrha, Myrtus, and Vitis vinifera."
