

Solaroo Energy Announces They are Partnering with SunPower

SunPower only works with three companies in Utah, as they have very high standards when it comes to who they partner with, and Solaroo Energy is proud to be one of the three, SolarooEnergy.com reports

SunPower only works with three companies in Utah, as they have very high standards when it comes to who they partner with, and Solaroo Energy is proud to be one of the three, SolarooEnergy.com reports. South Jordan, Utah - March 17, 2017 /MarketersMedia/ -- Solaroo Energy proudly announces they have partnered with SunPower, makers of the best Solar Panels Utah. Solaroo Energy is considered one of only three companies with the standards required by SunPower to distribute their panels in the state. Engineers, contractors and installers who work with Solaroo have confidence in SunPower as their newest partner. Solaroo Energy has earned an outstanding reputation for being on the cutting edge of residential solar for many years and incorporates the sales, engineering and installation as a complete process managed and controlled under one roof.

"At this time, 8.2 million quads of solar energy arrive at the earth every year, yet only 400 quads are currently used across the globe. A great deal of energy is being wasted as a result. Surprisingly, only .0005 percent of the earth would need to be covered with solar panels to power the entire globe, and Solaroo Energy and SunPower are working to help individuals and businesses make use of this free energy that isn't going away," Kelly Curtis, spokesperson for the Solar Utah company, explains.

Solar energy users currently save 75 million barrels of oil every year, along with 35 million tonnes of carbon dioxide. This benefits the planet in numerous ways, yet America isn't the leader in solar energy usage. In fact, the country comes in fourth, behind Germany, Spain and Japan. Germany currently has 9,785 MW solar energy installed, while the United States has 1,650 MW.

"Now is the time to convert to solar energy. Today, only .9 percent of global energy is provided by solar energy. We'd like to see this change, and the partnership between SunPower and Solaroo Energy will help to achieve this goal. Consumers can take advantage of the Federal Tax Credit, a credit which covers 30 percent of the cost of solar, and Utah grants a tax credit of up to \$2,000. Businesses find they obtain even more tax advantages when they choose to convert to solar energy, so now is the time to act," Curtis states.

Home values increase when a residence is powered by solar, and these homes sell faster than their non-solar counterparts. Very little maintenance is required once the panels are installed. The owner simply needs to monitor production to ensure the system is working as intended.

"Contact us today to discuss the benefits of solar power. A Solar Expert from our team will be happy to answer any questions and address any concerns you may have, so click here now. While speaking to us, be sure to ask about financing options or click here now for more information. We want to help you make the change to solar energy, and financing is one of the many ways we can do so," Curtis declares. You can view the contact information below, or find out more here.

About Solaroo Energy:

Solaroo Energy brings a combined experience of more than 60 years in the construction and solar industries and can proudly boast they have the best team in Utah. The sales team is educated and skilled at helping customers determine precisely what they need. In addition, the award-winning management team and engineers work with great precision to ensure the job is done correctly. All installers employed by the company are friendly and experienced and take pride in their work. Clients know they are in good hands when working with the Solaroo team.
