Innovative Dehumidifier Systems announces a new environmental monitoring program and data logging service for the Multifamily Construction and Property Management industry to assist property owners, managers and designers in an effort to eliminate apartment mold. Further information can be found at <http://www.HumidityHappens.com>. Ocean Isle Beach, United States - April 14, 2017 /PressCable/ --

Earlier today, Innovative Dehumidifier Systems announced the launch of its free environmental monitoring service for multifamily property owners and managers who are struggling to prevent mold in apartments. Architects, engineers and contractors who design and build apartments for multifamily developers should take note of this service as it will allow them to add value to their client relationship while working with one of the Multifamily Construction and Property Management industry's foremost experts in the field of moisture management and mold prevention.

"Increased energy codes and tighter construction methods are creating buildings that retain moisture. Eliminating moisture build-up from occupant activities, mechanical ventilation and infiltration is the key to preventing mold in apartments in many cases," according to Ron Revia, Product Manager at Innovative Dehumidifier Systems. "By offering a service like environmental monitoring, we can pin point how extensive the moisture problem is and select an appropriate solution based on real data. Ultimately this is going to be a huge benefit to our clients because we can customize solutions based on the specific needs for that application."

Innovative Dehumidifier Systems was established in August 2012 and the original IW-25 prototype was placed into service in an apartment complex in Southern Pines, NC in 2011. The primary mission of Innovative Dehumidifiers has always been to assist multifamily property owners and managers with managing excess humidity and moisture issues that can lead to property damage, health issues for tenants and legal consequences for owners. By adding environmental monitoring to its product offering, Innovative Dehumidifier has become a turn-key solution for apartment professionals searching for an answer to excess humidity or moisture issues which can lead to apartment mold.

Innovative Dehumidifier offers its premier product as the only multifamily unit dehumidifier system on the market. Innovative Dehumidier is an Ocean Isle, North Carolina based company created by Brian Smith and Tom Honeycutt, who developed the IW-25 to meet the building industry's growing demand for an appropriate humidity solution for multifamily spaces.
