WiseGuyReports.Com Publish a New Market Research Report On - "Projector 2017 Global Market Expected to Grow at CAGR 9.61% and Forecast to 2022".Pune, India - April 14, 2017 /MarketersMedia/ -- The analysts forecast the global projector market to grow at a CAGR of 9.61% during the period 2017-2021.

A projector projects an image or a video onto a surface, commonly referred as a projection screen. The majority of the projectors create an image by passing light through a small transparent lens, but the latest models of projectors are capable of projecting the image by using lasers. The global projector market is heavily influenced by the advances in technologies of the projector. Since 2012, technology innovations have led to improved image resolution, increased energy efficiency, and decreased space constraints with the advent of portable pico projectors. The advent of laser projectors ensures that even small portal projectors can project images and videos with high brightness. Embedded pico projectors are expected to dominate the pico projector segment as there is increased demand for flexible devices that consume less space and are affordable. Also, embedded pico projectors are becoming an important platform for augmented reality, the upcoming technology in electronic devices.
