Software Asset Management best practices are used by JustSAMit to deliver top notch IT managment services to their clients.

Software Asset Management best practices are used by JustSAMit to deliver top notch IT managment services to their clients.Petaling Jaya, Malaysia - April 15, 2017 /PressCable/ --
Many companies simply don't have the time, personnel, expertise, and resources to track the licenses of their software and make sure they are up to speed to help the business run efficiently.
Software Asset Management or just simply, SAM, is the expertise of JustSAMit in Malaysia. The company offers a cloud solution to effectively manage the software and hardware used by their clients. This automation feature helps businesses continues to run smoothly while software update and hardware relevancy are automated by the JustSAMit team in the background.
The JustSAMit solution has allowed companies to keep track of their IT assets, reduce overall IT costs, and always using up-to-date software for business processes. Clients rely on them to keep an inventory of their software and hardware, check for unlicensed IT assets, comply with license requirements, and remove assets that lack support or have reached the end of its service life.
JustSAMit risk management services informs their client of potential risks in the form of outdated patches and software, expired warranties of assets, and even the significant changes done to their software or hardware after the last update/upgrade. This functions both as a deterrence to hackers and cyber criminals, as well as, ensuring the company has minimal risks with the tools and processes they're currently running.
The company helps it's clients see their IT Assets through one monitoring lens which makes management more effective. The work is integrated into a cloud solution that allows for more productivity out of their assets and their staff who use these assets.
JustSAMit program provides clients a wealth of information on the apps used by their company, assuring them that they will be able to maintain an updated asset list which will be monitored extensively to keep security threats and possible attacks away.
