Wiseguyreports.Com Adds "Agricultural Biotechnology Global Industry Analysis, Size, Share, Growth, Trends and Forecast 2017 To 2022"

Global Agricultural Biotechnology market is accounted for \$20.08 billion in 2015 and is expected to reach \$39.5 billion by 2022 growing at a CAGR of 10.1% from 2015 to 2022. Factors stimulating the market growth are increasing demand for food, growing area of biotech crops, rising demand for biofuels & bio plastic production and demand for animal feed. Furthermore, increased investments and capital inflow for industry participants and research & development within Africa and Asia Pacific region will provide more growth prospects towards the market. However, stringent government rules and unacceptability of genetically modified crops will hinder market growth.

Transgenic seeds and synthetic biology-enabled products will be the largest segment of the agricultural biotechnology application market. Soybean is anticipated to dominate the transgenic crops segment. North America commanded the regional market owing to increasing genetically modified crop cultivation. Asia Pacific is the fastest growing market due to large scale consumption for food, fiber, feed, and energy production.
