According to Statistics MRC, the Global Turbo Compressors market is accounted for \$12.76 billion in 2015 and is expected to reach \$19.95 billion by 2022 growing at a CAGR of 6.6%. The primary purpose of turbo compressors is to eliminate the pressure surges during the process of gas injection, which in present is demanding technique in all heavy industries. The ongoing exploration processes in oil refineries & petrochemical plants in addition to HVAC in automation are some of the major factors attributing to market growth. However, huge operational and technical standards are factors hindering the market.

Oil & gas segment is accounted for largest market application, attributing to its huge demand for power generation and transportation usage. The 0-20 bar segment holds creditable share as turbo compressors are used in various applications including fertilizer plants, refineries, air compression and refrigeration. North America holds the largest market share on account of present shale gas exploration. While Asia Pacific is estimated to be the fastest growing market in regard to increasing demand for axial turbo compressors followed by centrifugal turbo compressors.
