Market Synopsis and Scenario

Healthcare industry is at a stage of rapid change. Advancements in genetics, biomedical, and information technology are ushering towards effective personalized treatments according to the individual characteristics of the patients. Therefore, exploiting these opportunities requires effective use of big data.

Increasing government initiatives, pressure to curb healthcare costs, new technological advancement like mHealth, Internet of Things (IOT) and wearables are major factors driving the growth of the big data in healthcare market.

The network equipment segment is expected to witness a healthy growth at a sizable CAGR rate over the forecast period, owing to the reinforcement of new network infrastructures in order to offer enhanced security.

The visualization segment emerged as the fastest growing software segment over the forecast period, which is ascribed to the elevating demand for visuals to represent the analyzed data and convey exact interpretation to consumers.
