The muscular system is one of the most complex systems of the human body. Memorizing each muscle and muscle group can be a considerably difficult task, especially without visual help.

The new Muscular System Coloring Book from Pamphlet Books aims to help anatomy students memorize the muscular system more effectively using visual aids and motor activity.

Coloring has been shown to increase information retention in a wide range of activities. Blending colors and written information can help improve memory while also making the learning process less tedious.

Furthermore, coloring is a relaxing activity, many adults looking for adult coloring books as a pleasant pastime activity.

Pamphlet Books launched the Muscular System Coloring Book to provide a comprehensive learning aid for students looking to memorize the muscular system. The book is divided in 52 chapters containing both labeled and unlabeled illustrations of various muscle groups.

By color-coding each label and individual muscle groups, the student can more easily remember the form, position and name of particular muscles. The unlabeled pages are designed as evaluation tool, allowing students to assess the efficiency of their learning endeavor.

All illustrations are realistic and clear, in an effort to provide a textbook that can be used by both teenage and adult students.

A spokesperson from Pamphlet Book stated that versatility is one of the key concepts behind the Muscular System Coloring Book: "Whether it's a student attempting to pass a big medical exam, or an individual intent on learning more about how to target working out different muscular regions of the body, this coloring book makes it easy to understand and even easier to memorize through the therapeutic process of simply coloring."
