

Helping Freelancers Build the Businesses of the Future

The Future Belongs to the Creative Class. Bric is helping freelancers build the businesses of their dreams.

May 30, 2017 (FPRC) -- Bric has launched a series of free tools to help freelancers build their teams. Located in Nebraska Bric is actively working to grow the creative class in the Midwest and around the world.

Bric's software is used by teams of software developer and graphic designers. Today these teams employ between 10 and 100 people. However, they all started the same way: a great creative or developer decided to start a business. They started freelancer and did great work. Over time they got more work. They hire people, and eventually they realize they have a business.

Bric is helping today's freelancers build the businesses of the future. We are donating 10% of our time to building software, tutorials, and templates to help freelancers expand their teams. Our first free tool is a time calculator.

Bric's free time calculator allows freelancers to quickly create time cards. This allows them to comply with client's vendor requirements without having to complicate their business or increase their expenses. It also allows them to create beautiful and professional invoices. In addition, as they grow their team they can have new employees and contracts use the time calculator to create timesheets for processing payroll.

The future belongs to the creative class. Bric and other companies need to create tools to help more people build creative businesses.

About Bric.

Bric is a software company that helps creative teams plan and track time. Bric gives time tracking a new purpose. Instead of focusing on invoicing and payroll, Bric helps maximize your team's time and skills. Their software is used in 70 different countries.
