

Thermalabs Air Introduces Inagua Art Airbrushing Machine

Thermalabs Air has introduced yet another airbrushing system

July 28, 2017 (FPRC) -- Thermalabs Air, a firm that manufactures top-notch airbrushing machines, has furnished the market with yet another airbrushing system known as the Inagua Art. This is a comprehensive system designed for a wide range of airbrushing applications. Among other things, the machine can be used to apply cosmetics, paint tattoos, and even body art. Thermalabs Air has said that this particular system was designed to provide users with a much better solution, and more so give the competition a run for their money.

Thermalabs Air is a small, upcoming firm that's owned by Thermalabs, one of the largest manufacturer of cosmetics around the world. Thermalabs is headquartered in New York City but operates a number of production centers in other parts of the world. In addition to Thermalabs Air, other sub-brands owned by the company include Supremasea, Tent World, and Organic Healthcare. Supremasea is the company's arm that produces top-notch skincare products based on Dead Sea mineral salts. Tent World, on the other hand, is a premier brand that designs beach and outdoor tents. Thermalabs Organic Healthcare is the latest sub-brand in the company's list. It produces health products based on 100% bio-organic ingredients.

Thermalabs Air was launched some two years ago, starting out with a spray tanning tent that sold like hot cakes. The firm's decided to venture into the airbrushing niche in line with its commitment to provide top-notch products for its self-tanning audience. Currently, Thermalabs Air has furnished the market with a comprehensive range of at least 6 airbrushing machines, and 3 airbrushing and spray tanning tents. The company has also said that it's working on brand new systems that will be due for launch towards the end of this year.

The Inagua Art Pro airbrushing machine that the company has announced is popular with self-tanning buffs, makeup artists, and cosmetics salons. The system essentially nullifies the need to use brushes, sponges, fingers, and other common tools to apply makeup and cosmetics. The Inagua Art Pro airbrushing system from Thermalabs Air dispenses very fine makeup mist that's dispersed through the airbrush gun and forms a uniform, smooth and hard-to-notice layer on the skin. The machine is easy to use by the complete beginner, but also works great for skilled makeup artists. Thermalabs Air has said that the Inagua Art Pro is the must-have machine for anyone who's looking for a flawless, natural complexion.

The Inagua Pro works excellently well for body painting, nail art, tattoos, makeup and cosmetics application, and even cake decoration. The company has said that adjustable spray patterns, low-maintenance nozzle and high precision make this particular accessory superior to the competition. Customers can obtain this machine directly from the firm via [Thermalabs.biz](http://thermalabs.biz).
