

CertExams.com Updates CCNA NetSim with More Features and Devices

Certexams.com recently released a major revision of CCNA Netsim product to support more recent routers and switches. Most labs, now include a detailed explanation on commands used. Free demo download is available.

March 13, 2019 (FPRC) -- CertExams.com thoroughly updated CCNA NetSim. As you might be knowing, Routing and switching is one of the most important technical area in networking. Network simulator that supports Cisco router and switch IOS commands that are usually seen in CCENT/CCNA exams. This software has been developed to help candidates preparing for any Cisco CCENT/CCNA exam to get familiarized with router and switch networking labs and have hands-on practice. It is also useful for professionals starting to learn networking using Cisco router, switches, and other networking devices.

Features include the following:

1. Router console simulator for IOS
2. GUI configuration tool
3. Support for 100+ router and switch commands
4. Several labs for thorough hands-on preparation
5. Detailed help files

The demo version of the software is limited to fewer commands and labs. Full version enables candidates to access complete list of labs and commands, and practice the same.

The software is compatible with Windows 7/8/10 32/64-bit operating systems.

More information on this product is available at CCNA Netsim home page:
